e2v

To be read in conjunction with "Introduction to Pellistor Gas Sensors" and Pellistor Application Notes 1, 2, 3, 4, 6 and 7.

#### INTRODUCTION

The VQ24 consists of two matched elements which are used for the detection of combustible gases, particularly methane in air mixtures in concentrations from 0.1% upwards.

There is no interference from water vapour or carbon dioxide. Using the recommended bridge circuit (see below) and the mounting arrangement shown on page 2, the minimum sensitivity is 30 mV/% methane.

The low power consumption of the VQ24 makes it suitable for use where the power consumption must be minimised, e.g. battery operated systems.

## **GENERAL DATA**

#### Electrical

The information given below relates to the VQ24 operating in the recommended circuit shown.

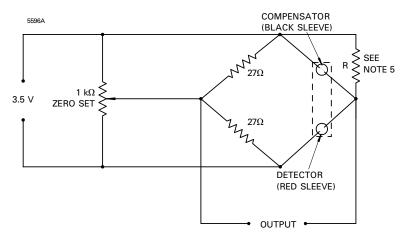

Operation (see note 1)								CC	ontinuous
Bridge supply								. 3.5 -	<u>+</u> 0.1 V
Typical sensor current .								90	mA
Maximum sensor current								100	mA
Minimum sensitivity (see	not	te 2	2)				30	mV/%	methane
Linearity					lir	nea	r up	o to 3%	methane
Response time to register	1	1/4%	6 ir	۱a	2 <sup>1</sup> /	2%			
concentration (see note	es 2	2 ar	nd 3	3)				. 2	seconds

Maximum methane concentration

#### Mechanical

Mounting .													see page 2
Outline	•			•									see page 2
Shock test							25	0 g	, 5	blc	ws	; in	each plane
Vibration test	•	•	•	2	20 g	, 2	24 c	ycle	es '	fror	m 1	00	to 3200 Hz

### **BRIDGE CIRCUIT**

## er vapour or carbon dioxide. NOTES

MARKING

- 1. Operation may be under either direct flow or diffusion conditions in appropriate mountings (see page 2).
- 2. With open-circuit conditions at the bridge output.

label on the base identifying the device type.

- 3. The response time is a function of the type of mounting used.
- 4. If the VQ24 is exposed to greater than 5% methane concentration, the calibration of the instrument should be checked.
- 5. The elements are supplied as a matched pair with a trimming resistor R of the correct value. The trimming resistor is to be connected across the compensator element as shown below.
- 6. The elements must be protected from certain organic and silicone vapours by suitable filtering, and caution should be exercised when operating in close proximity to hot, oily machinery.

# VQ24 Combustible Gas Detector Elements

Each element is identified by a unique serial number written on the can of both the detector and compensator. The serial

number is written in red on the detector and black on the

compensator. In addition, the detector carries a red circular
