

Sensicast Network Software

Sensicast Systems™ is the leading provider of intelligent wireless sensor network software. With Sensicast's intelligent, bi-directional routing software, sophisticated network power management, and an easy-to-use data gathering and historical reporting interface, the Sensicast Network Software is the easiest way to begin exploring the capabilities of your wireless sensor network. Thoughtful integration with the MICA2 Motes from Crossbow Technology, provides an ideal evaluation, demonstration and development platform. Furthermore, through clear documentation, the Sensicast Network Software Upgrades provide for the simple integration of existing or next-generation sensors and actuators, a software application programming interface (API) and an open platform, affording the opportunity to create custom applications that suit your precise needs. Sensicast's software and development services help provide end-to-end solutions for real customer applications as well as the fundamental tools you will need to explore this new technology segment.

Sensicast Architecture

The Sensicast Network Software provides the capability to deploy wireless sensor networks of varying architectures quickly and efficiently. Realizing that different applications require varying network requirements, Sensicast has developed software enabling ad-hoc wireless sensor networks to be configured in a manner that best suits the needs of the application. For example, the selected Sensicast Network may be optimized either for power or reduced network latency. If it makes sense for the application, the network can be dynamic and self-healing, minimizing the need for active network management. For all architectures, the Sensicast Network Software permits bi-directional communication, and will reliably transmit sensor data to host computers and also permit the incorporation of actuators that respond to the real-time sensor data.

Benefits

Sensicast's Software provides numerous benefits:

<u>Feature</u>	<u>Benefits</u>
Fully tested device software	Enables quick setup times and permits focus on applications using networks, rather than troubleshooting the networks themselves
Bi-directional communications	Increases configuration options, allows control of actuation functions, enables message acknowledgements
Fully documented sensor /actuator integration	Quickly incorporate custom sensors for prototyping
Supports various network architectures	Allows the network to be optimized based on customer and application desires
Power managed architecture	Maximizes battery life for longer term deployment
Dynamic and self-healing	Permits applications with mobile sensors and nodes

Upgrade Offerings

Sensicast believes that while exploring applications of wireless sensor networks you should be focused on your application research and development, rather than the trials and tribulations of navigating a continually evolving development environment.

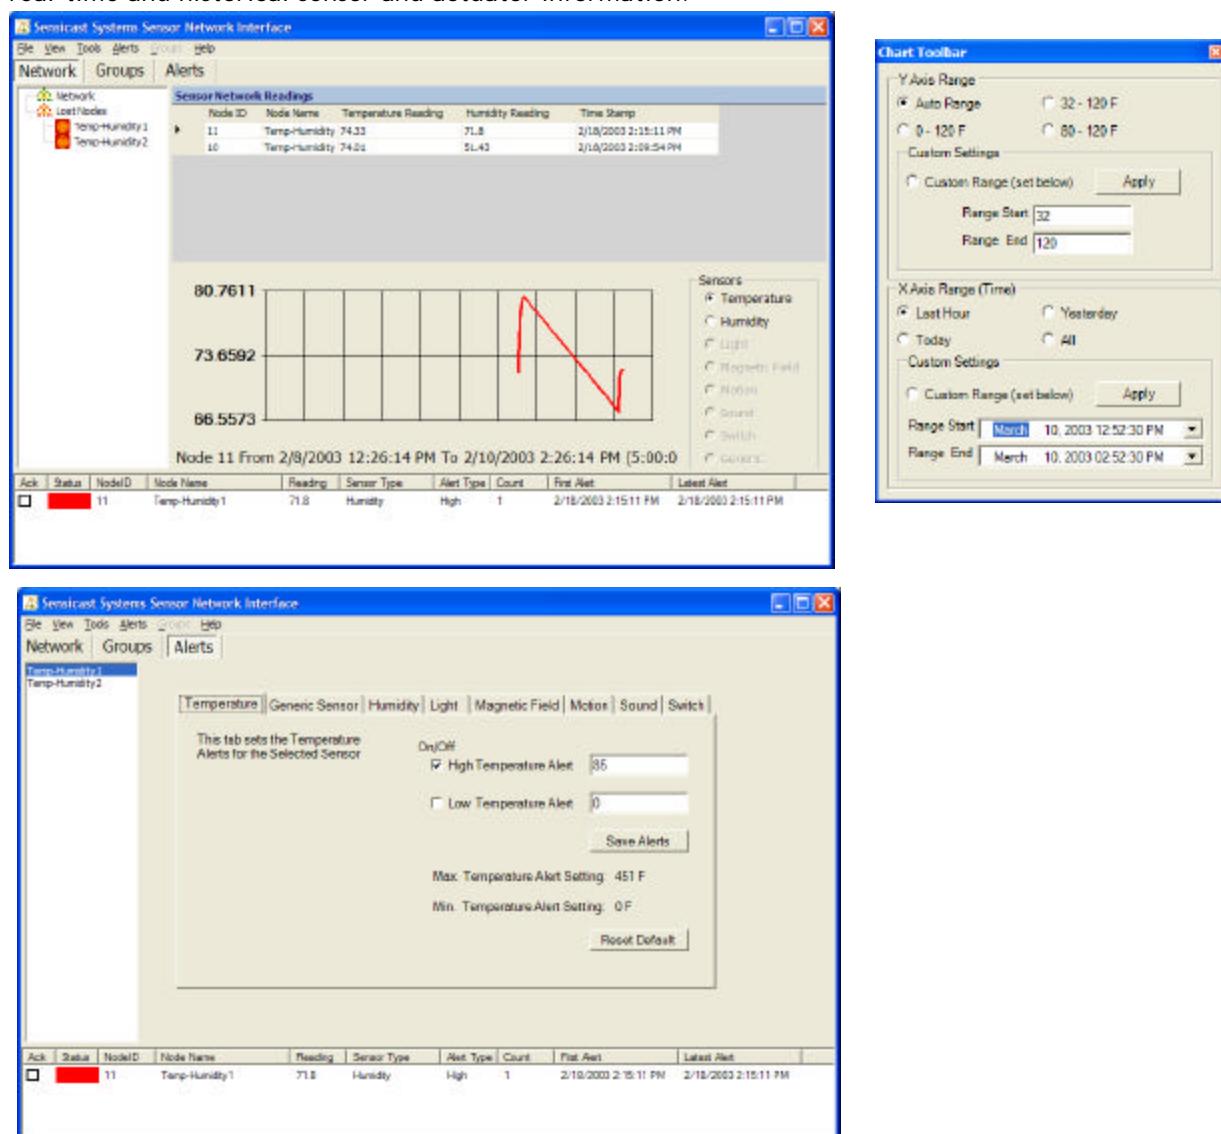

- **Sensicast Evaluation Upgrade:** Using the Sensicast Software, you can have your basic wireless sensor network up and running within 10 minutes. View the network layout and change

SUNSTAR传感与控制 <http://www.sensor-ic.com/> TEL:0755-83376549 FAX:0755-83376182 E-MAIL:szss20@163.com
parameters such as node duty-cycle. Instantly begin collecting and plotting environmental or other sensor data or generate basic reports based on the historical data collected.

- Sensicast Development Upgrade:** Begin using advanced network architectures (e.g., powered repeaters and extended-hub-and-spoke scenarios) with the Development Upgrade. Using Sensicast's documented protocol, efficiently integrate analog sensors and basic actuators into the network. With Sensicast's software application, you can group nodes by type and set alarms to trigger alerts when certain sensor reading thresholds have been exceeded. Or use the Windows-based API to develop your own custom applications.
- Sensicast MicaWeb Upgrade:** Get the full benefits of a distributed wireless sensor network by incorporating Crossbow's MicaWeb loaded with the Sensicast Software. An enterprise-class system, the Sensicast MicaWeb Upgrade permits full Ethernet connectivity between one or many wireless sensor networks. Utilize the XML-based API to create custom software applications or write your own queries over an enterprise ODBC database.

Sensicast Host Software and User Interface

Sensicast's host software is the console through which you can control and view the network architecture and real-time and historical sensor and actuator information.

For more information, please contact Sensicast at 781.453.2555 or sales@sensicast.com

SUNSTAR 商斯达实业集团是集研发、生产、工程、销售、代理经销、技术咨询、信息服务等为一体的高科技企业，是专业高科技电子产品生产厂家，是具有 10 多年历史的专业电子元器件供应商，是中国最早和最大的仓储式连锁规模经营大型综合电子零部件代理分销商之一，是一家专业代理和分銷世界各大品牌 IC 芯片和電子元器件的连锁经营綜合性国际公司，专业经营进口、国产名厂名牌电子元件，型号、种类齐全。在香港、北京、深圳、上海、西安、成都等全国主要电子市场设有直属分公司和产品展示展销窗口门市部专卖店及代理分销商，已在全国范围内建成强大统一的供货和代理分销网络。我们专业代理经销、开发生产电子元器件、集成电路、传感器、微波光电元器件、工控机/DOC/DOM 电子盘、专用电路、单片机开发、MCU/DSP/ARM/FPGA 软件硬件、二极管、三极管、模块等，是您可靠的一站式现货配套供应商、方案提供商、部件功能模块开发配套商。商斯达实业公司拥有庞大的资料库，有数位毕业于著名高校——有中国电子工业摇篮之称的西安电子科技大学（西军电）并长期从事国防尖端科技研究的高级工程师为您精挑细选、量身订做各种高科技电子元器件，并解决各种技术问题。
