j. It will automatically turn the power off when measurement is over for 8 min 40 sec.

k. When measurement is over, but if the temperature rises within 8 min 40 sec, the °C(or°F) mark will flash again (repeat from step 2-d), and starts to count 8 min 40 sec again.

l. When beep sound is on for 4 sec, the temperature is not measured.

- ◆ When power off: the standby current <1μA.
- ◆ The frequency of the buzzer is 4kHz or 8kHz by pin option.
- ◆ Fever alarm is pin option.
- ◆ Bonding option °C or °F
- ◆ Measurement to 0.01 degree in either °C or °F
- ◆ Sensor use 503ET.
- ◆ Reference resistor is the value (sensor in 37.00°C)
- ◆ The low battery and "M" flag cannot display when the temperature shows Hi or Lo.
- ◆ When battery voltage is low, the battery mark "V" flashes at a speed of 1Hz and the measurement may not be accurate. The low voltage detects: $1.35V \pm 0.05V$.
- ◆ During the process of mass production, in order to adjust the reference resistance (RF), let test 2 be floating, the measured temperature will be the actual temperature of the measured environment. It can be up or down, not always the higher one.

5. Function Descriptions

- ◆ Power sw: push switch to turn the power on or off.
- ◆ When power on: push the switch, then it will generate a "beep" sound for 0.125 sec.
 - First displays all the segments on for 2 sec.
 - After a., as described above, then shows the last-time measured temperature for 2.8 sec.
 - After b., shows the self-test temperature ($37.00 \pm 0.01^{\circ}\text{C}$) or ($98.60 \pm 0.02^{\circ}\text{F}$) for 1 sec. The °C mark will flash at a speed of 1Hz.
 - After c., displays the highest measured temperature, then the °C mark will flash at a speed of 1Hz.
 - If the temperature is $< 32.00^{\circ}\text{C}$ (or 90.00°F), the display shows Lo °C.
 - If the temperature is $\geq 42.00^{\circ}\text{C}$ (or 108.00°F), the display shows Hi °C.
 - The display always shows the higher temperature during the temperature measurement.
 - If the measured temperature does not change for more than 8 sec, the measurement is over and the °C mark flash stops.
 - When measurement is over, if the temperature $> 37.50^{\circ}\text{C}$ (or 99.50°F) the buzzer alarms "beep-beep-beep--beep-beep-beep--" for 4 sec,
